PRACTICAL WORKSHOP OF SURGICAL HYSTEROSCOPY

2nd May 2017

Medtronic

ETHICON
a Johnson & Johnson company

Palex

Introduction and objectives

The hysteroscopic workshops organized by Del Mar University Hospital is a practical training course for specialists in obstetrics and gynecology.

Previous experience in diagnostic hysteroscopy is needed for only practice participants

The practice participants will be able to make real practice in different hysteroscopy surgeries, with different surgical devices, guided by an international expert on each of them.

We have chosen the four main hysteroscopic surgical devices: Versapoint, Mini resectoscope, trochlear 5.0 and Diode laser and 12 different patients.

Each participant will have the opportunity to train in 2 procedures, with two different devices.

The attendants without training will take part of surgeries and discussions from the conference room in a very interactive session.

During the afternoon we will offer the opportunity to try different kind of pelvic trainers, in a guided session, by expert hysteroscopy surgeons. Designed in order to improve your hysteroscopic skills.

Program: May 2 of 2016
